

YouTube Transcript API Error: Missing Attribute 'list_transcripts'

Author: Unknown

Date: Unknown

Source: Unknown

The provided text indicates a technical error encountered during an attempt to extract a YouTube transcript. Specifically, the error message states: "type object 'YouTubeTranscriptApi' has no attribute 'list_transcripts'". This message is characteristic of a programming error, most likely within a Python script utilizing a library designed to interact with YouTube's transcript services, such as the `youtube-transcript-api` library. The error signifies that the `YouTubeTranscriptApi` class or module does not possess a method or attribute named `list_transcripts` as expected by the calling code. This issue could stem from various factors, including an outdated or incompatible version of the library, a typo in the method call, or a change in the library's API where `list_transcripts` might have been renamed, deprecated, or removed. The error prevents the successful retrieval or listing of YouTube transcripts.
